

I never really had time to visit
Brad's Carwash on the way to work
in the morning...

But now I do!

**SiteWatch® FastPass® and Automatic Recharge Module (ARM)
Use New Technology To Enhance Your Customer's Experience.**

Ok, so maybe this customer never heard of SiteWatch FastPass or Automatic Recharge Module (ARM), but he's sure happy that his favorite carwash uses our wireless acceptance system and monthly club plan module.

That's because FastPass and ARM let him drive through a special VIP Pass lane in less than 3 seconds without even rolling down his window. In the past, it took him over a minute to buy a wash, or even longer if the manager came by to say

"hello." (Now he just waves to the manager as he drives up to the tunnel.) Plus he no longer loses time waiting in line behind slower customers who don't use FastPass.

Saving time is critical when you're on a tight schedule. That's why this busy customer can now stop at Brad's during the week, instead of visiting only on Saturdays. Thanks to FastPass and ARM, Brad's carwash has become more convenient for his customers – and more profitable for Brad.

FastPass completes transactions in less than 3 seconds.

Why SiteWatch FastPass and ARM?

The more TIME you save customers, the more TIMES they'll visit your carwash.

How FastPass® and the Automatic Recharge Module Work Together

- Customer swipes their card at the Xpress Pay Station and selects the monthly pass plan of their choice.
- FastPass tag is placed on customer's windshield.
- When customer pulls up to an Xpress Pay Terminal, the FastPass tag is read wirelessly (under 3 seconds), and car goes directly to tunnel.
- ARM automatically charges the customer's credit card to renew their pass plan every month.
- Both FastPass and ARM are very flexible, and were designed to be used at full-service, flex-serve and express exterior sites.
