

TunnelWatch Saves Carwash Over \$4,332 A Year In Operating Costs.

System Lowers Utility Bills By 14.4%, Pays For Itself In Under 2 Years

The *TunnelWatch Tunnel Controller* from DRB Systems can save you money by lowering operating costs. We always knew that – and now we have the numbers to prove it.

A recent independent engineering study, conducted for DRB Systems at a full-service carwash, found that replacing a standard controller with *TunnelWatch* cut chemical and utility costs by **\$361 a month** (\$4,332 a year).

How did *TunnelWatch* achieve these savings? Simply put, our system minimized wasted cycle time in the test-site tunnel so that chemicals and utilities could be

used more efficiently.

TunnelWatch controls equipment in terms of inches, instead of counting pulses as standard controllers do. This precise to-the-inch control allows *TunnelWatch* to activate dryers, arches and other equipment only when needed, without “cycling up” early, or staying on after a car has passed.

The bottom line: TunnelWatch won't waste your money by spraying water and chemicals into empty space. But don't take our word for it – just ask the folks at Yund's Carwash, Wooster, Ohio, the full-service wash that served as the test site. Thanks to *TunnelWatch*,

they've been able to:

- Reduce electrical costs by 2.3 cents per vehicle.
- Save 4.5 seconds in drying cycle time per vehicle.
- Lower water costs by 1.73 cents per vehicle.

If *TunnelWatch* achieved these results at Yund's Carwash, imagine what it can do for your wash!
