

# DRB Systems: Proven Performance At The High Volume Carwash

Carwashes run with computer products from DRB Systems clean 308,281 vehicles every day.

Our CarWatch®, SiteWatch® and TunnelWatch® systems are used at carwashes that clean 3,000+ vehicles on busy days.

Full service carwashes that pre-sell customers "out on the lot" handle 250,000 vehicles a year using our products.

## CLEAN MORE VEHICLES IN LESS TIME

If you have a high-volume wash (or are growing in that direction), call DRB Systems. The busier you get, the more you'll appreciate our products. Here are some reasons why:

1. Our keypads and touch screen terminals are built for speed. Each unit features very responsive, pressure-sensitive keys. The Touch Screen Terminal is the same as those used at many fast food restaurants including

### LONG LINES COST CUSTOMERS

In a recent survey conducted by the respected America's Research Group, 83% of women and 91% of men say that they have stopped going to a particular retail business in the past because of long lines.

McDonald's®. Both have a logical layout that's easy for employees to navigate.

2. "Power buttons" on our cash registers allow package washes to be entered with a single keystroke. Shift changes can also be made with the push of a button. New transactions may be started automatically, without pressing the "open" or "salesman" key.

3. Credit cards are cleared at the cash register when the sale is entered - no separate "clearing machine".

4. Our fast receipt printer begins to generate a receipt as the transaction is taking place.

5. Loyalty promotion and club plan incentives are awarded automatically, eliminating errors and extra keystrokes.

### SPEED COUNTS

The average fast food restaurant takes 203.6 seconds to fill a drive-through order. At McDonald's®, sales rise 1% for every 6 seconds saved at the drive-through. Doesn't it make sense to apply these speed principles to your carwash?

6. Pre-paid transactions are entered into our system "instantly" by scanning cards or bar-coded strips - no added keystrokes required.

7. Queuing feature allows you to process transactions "up line" and avoid slow-downs at the conveyor entrance.

What's next? Take time from your busy schedule to call us at **1-800-336-6338**.
