

Introducing The New SiteWatch® XPT From DRB Systems.

Engineered for a high-production carwash environment, the SiteWatch XPT (Xpress Pay Terminal) features an ATM-like interface with a 10.4 color graphics display, built-in speaker, intercom help button, and customizable audio/video capabilities for communicating with customers. It interfaces with Gilbarco and Wayne fuel pumps.

Attention Multi Profit Center Owners:

The SiteWatch XPT's Replication Logic feature allows it to share information with all of your sites. So your prepaid and loyalty customers will be able to use the same cards and ticket books – plus earn credits toward their loyalty rewards – at any of your SiteWatch XPT terminals, as well as at any of your other locations.

The SiteWatch® XPT is more than a high-volume “Self-Pay Station” – it’s also a marketing and management tool. Here are eight ways it can help your carwash:

1. Works with prepaid cards and ticket books as well as annual passes, tokens, coins and bills. Our terminal also gives customers the option of viewing printed histories of their prepaid transactions.
2. Receipts can be sold as prepaid wash tickets. Your customer can buy a preset number of carwashes, which become contained within a barcode at the bottom of their receipt. When that customer visits next, they can simply scan and go!
3. Scans club cards and barcoded receipts, so you can run loyalty promotions, frequency discounts and 10th wash free incentives. You can have the terminal show a separate menu with special deals for club and VIP members.
4. Clears credit cards in less than four seconds, so customers can complete their transactions faster.
5. Prints intelligent receipts. Have different messages printed on your SiteWatch XPT receipts tailored to different customers based on their identity or the items they purchased. Use this feature to promote different profit centers. For example, you can now include quick lube discounts on your carwash receipts.
6. Reads coupon barcodes, allowing you to continue marketing your carwash through interactive mailings, Internet coupons, handout flyers and newspaper coupon ads.
7. Controls up to five gates with a “merge zone,” to assure accurate gate openings at high volume operations.
8. Provides detailed reports with separate accountability for each XPT station, all of them accessible off-site using PC Anywhere.
