

# DRB Systems®

## Stay Connected to your Tunnel from Anywhere with **TunnelWatch® 4.0**

*TunnelWatch 4.0 Live Status screen is accessible from any mobile device.*

### Featuring a Web-Based User Interface

- **Live Status** screen shows real-time graphical representations of vehicles as they pass through your tunnel along with production stats for your car wash. This information is accessible via your phone, tablet, or Internet-connected computer.
- New **Live Invoke** feature lets you make instant changes to tunnel functions from your phone.

- A new concept, called **Traits**, allows you to define different types of vehicles and vehicle features, and adjust equipment accordingly so you can save valuable relay functions; operate your conveyor more efficiently; and reduce wear and tear. In some cases, vehicle features can be recognized automatically through our Vehicle Profile Detection™ (VPD) function.
- Works with SiteWatch® CarPics® to show actual photos of vehicles (taken at the XPT® self-pay station) as they progress live through your tunnel. If you don't have CarPics, icons are used to represent vehicles.
- Smooth SiteWatch to TunnelWatch Interface with no SRMB or serial cable required.
- Cloud backup and recovery.
- **Device Saturation** configuration feature automatically cuts off solutions, like tire shine, when enough is already on equipment from previous applications. This lowers costs and enhances the quality of your service.
- Additional progress switches at tunnel exit for enhanced collision avoidance.

*Make tunnel changes from any internet-connected device.*
