

NoPileups™ Full-Tunnel Anti-Collision System

Wash More. Worry Less

Software Add-on 

NoPileups combines revolutionary technology with a dedicated support team to prevent tunnel collisions and increase production.

Using computer vision and machine learning, NoPileups stops the conveyor when collision threats are detected. That innovative technology is backed by our industry-leading support staff that monitors analytical data from NoPileups to provide insights that will help you improve the efficiency and safety of your tunnel.

Unlike other anti-collision equipment that only covers the exit, NoPileups protects cars across the entire length of the tunnel. Automatically prevent costly collisions that keep you from washing more cars with NoPileups.

- Minimize downtime
- Wash up to 20 more cars an hour
- Reduce damage costs
- Avoid customer conflicts and improve overall satisfaction
- Protect reputation and avoid negative online reviews
- Decrease employee turnover caused by the stress of potential collisions
- Gain new insight into tunnel operation and make performance improvements
