Multi-Site Replication

Quickly and Simply Transfer Data Between Locations

SiteWatch® has been created to allow the smooth transferral (replication) of data back to the home office and between sites. Items and prices can be "sited," allowing each to be active only at the indicated locations.

Features

Depending on the number of sites involved, you can replicate data between all the locations (via headquarters) as often as every five (5) minutes.

All data is securely transmitted using 128-bit encryption schemes. This is the same level of coding used by the financial industry to transmit data via the Internet.

Some of the key data that is replicated to and from the sites is:

- Configuration Data: Prices, terminal setups, item descriptions, etc.

- Sales History: Includes detailed transaction history, key operating statistics and sales information by profit center

- Labor Data: Employee information and timeclock data

- Customer Information: Visit history, club plan info, average purchase amounts, prepaid balances, etc.

Open Database Connectivity (ODBC)

Using ODBC, you can create your own reports using data collected by your SiteWatch systems. The ODBC module works with many ODBC-compliant applications such as Microsoft Office.

We provide you access to about 60 of the most popular and useful database tables. Your data is protected, and its integrity is assured by giving read-only access to the data.

The ODBC module comes with example queries that you can modify to suit your needs.

Multi-Profit Centers

Increase the "profit" in your multi-profit center sites by integrating them all into a single computer system for greater efficiency and control.

• A single POS system handles reporting for all profit centers, including car wash, detail center, and quick lube.

• Run cross promotions involving different profit centers and maintain tight control without being buried in paperwork.

• More convenient for customers — transactions started at one profit center can be completed at another.

• Monitor labor statistics by profit center as employees move from one department to another.
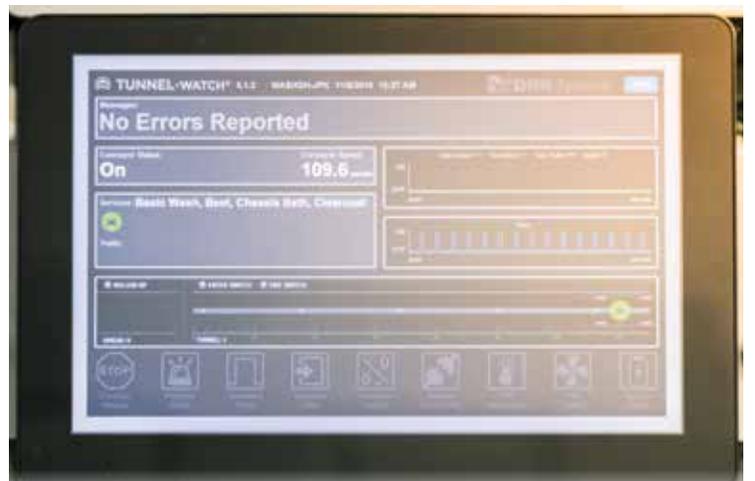

Products Supporting Multi-Profit Centers

SiteWatch for Car Wash

Whether you have one site or multiple sites, a car wash or multiple profit centers, SiteWatch POS is for you

TunnelWatch®

An easy-to-use PC-based controller with the most advanced functions
